

Bug Report

Document each bug found in the following format:

| | |
|--------------------|--|
| Bug Name: | getUser does not return a User |
| Description: | After trying to get the first User in the ArrayList, the method returned null. This was discovered by creating a new User that contained the same values as the first User in the ArrayList (this is my expected User). I created another user and set it equal to the first User in the List by calling get User (this is my actual User). I then used assertEquals(expected, actual) to see if they were the same, but in the error report, it showed that my actual was null. This means my getUser method returned null incorrectly. |
| Test Case: | testGetUser |
| Location of error: | Users class, getUser method |

Report:

```

testGetUser
Message:
N/A

Bug Report

Document each bug found in the following format:

| | |
|--------------------|---|
| Bug Name: | haveSuspect method returning incorrectly |
| Description: | Since this method across all our classes has bugs, I think something is wrong with saving information to the ArrayLists. Unfortunately after looking over the code, I do not have any idea what is not functioning properly, but either way the haveSuspect method returns false no matter what. This means that both the haveValidFirstSuspect and haveValidSecondSuspect tests both fail. |
| Test Case: | haveValidFirstSuspect, haveValidSecondSuspect |
| Location of error: | Suspects class, haveSuspect method |

|--------------------|---|
| Bug Name: | assertIsWrong |
| Description: | The assert was set to true at the beginning and switched to false at the end. |
| Test Case: | testAddEvidence |
| Location of error: | In EvidencesTest and in the add method |

```
✓ testAddEvidence Failed 0.01s 
```

Message:
